TWIN STACK

*Stacking the odds
in your favor*

AGWAY
MANUFACTURING INC.

*Twin Stack is saving
farmers time & money
by cutting the number
of bale drops in half.*

No Electronics, No Hydraulics, No Headaches

Large square baling just got faster. Farmers are now saving time and money by cutting the number of bale-drops in half.

That means half the required cross-tracking by the loader and wagon crew, making it quick and easy to pick up two bales at one time.

the load. As the release arm trips, the drive-wheel lowers, contacting the steel corrugated fly-wheel which activates the base rollers and provides a smooth transition onto the ground.

The Twin Stack quickly adjusts in the field for different bale lengths ranging from 5 to 8 feet.

Take a sure bet and stack the odds in your favour with the Agway Twin Stack. Contact your local Agway dealer to get a Twin Stack behind your baler.

Automatic Operation

It's easy to use and easy to setup because everything is mechanically driven and operates automatically.

There are no hydraulic or electrical components to hook up. It's all part of how the Twin Stack is designed with low maintenance in mind, allowing

you to stay in the field longer without worrying about costly down-time.

As the first bale enters the Twin Stack, it's kept in constant control with the spring-loaded Bottom Bale Control Arm. This allows the bale to be gently lowered into the base of the unit without damage.

The top bale is then pushed into place and applies pressure against the release arm on the back of the Twin Stack to drop

SPECIFICATIONS

	TS-32	TS-48
Bale Width.....	3' x 3'	3' x 4'
Bale Length.....	5' to 8'	5' to 8'
Weight (lbs.).....	4,000	4,200
Height.....	95"	95"
Width.....	88"	106"
Tires.....	Rear 12.5 15 10ply Front 11L15 8ply	

OPTIONS

Winch Arm
Signal light kit

Adjustable rollers provide easy set-up for bales lengths from 5' to 8'

Steering Guide Arms direct the bale into proper position when cornering

Bottom Bale Control Arm gently lowers the bale without causing damage

Winch arm (optional) easily retrieves the last bale and pulls it through
